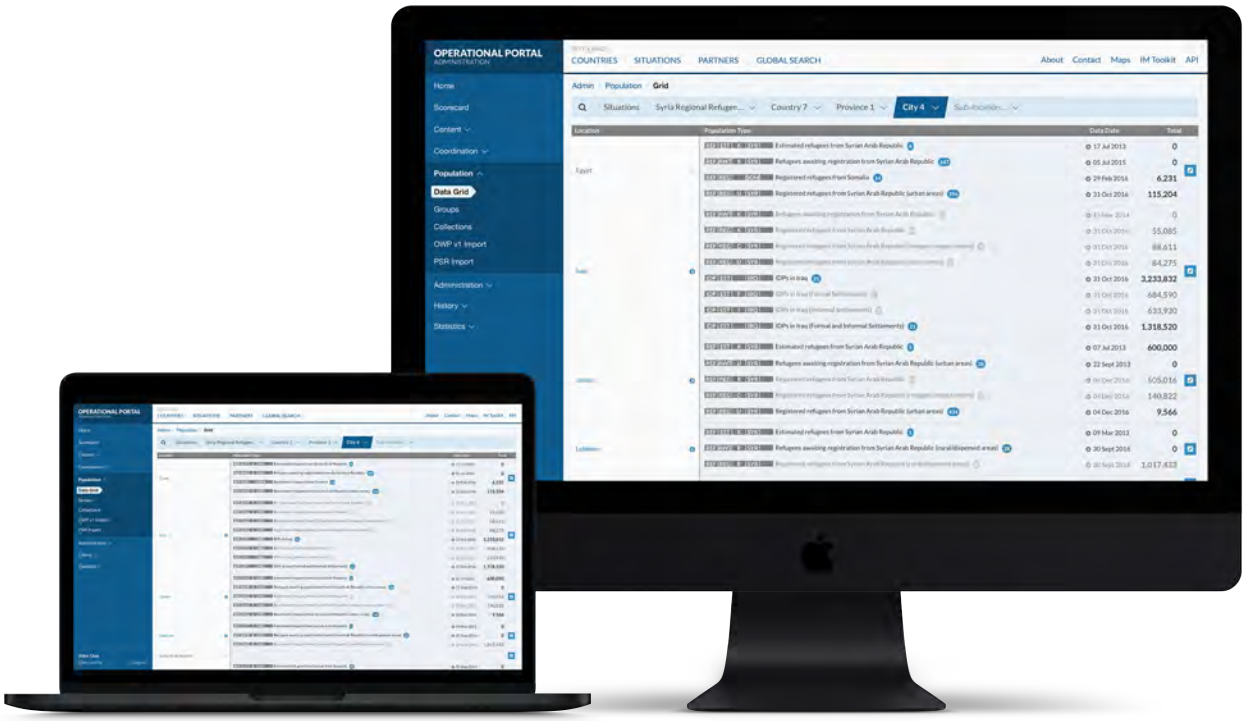
OWP Data Portal

Global refugees status website

The Global refugees status information website is targeted towards both the general public and UNHCR staff. The general public consumes the information on the site as a recent source of information regarding the current status of refugee situations around the world. It is not only a source for the most recent available statistics, but also an overview of news, relevant URLs, attractive visualizations and much more. With an easy to use and share mechanism, visitors share particular content or entire webpages on their social media accounts.

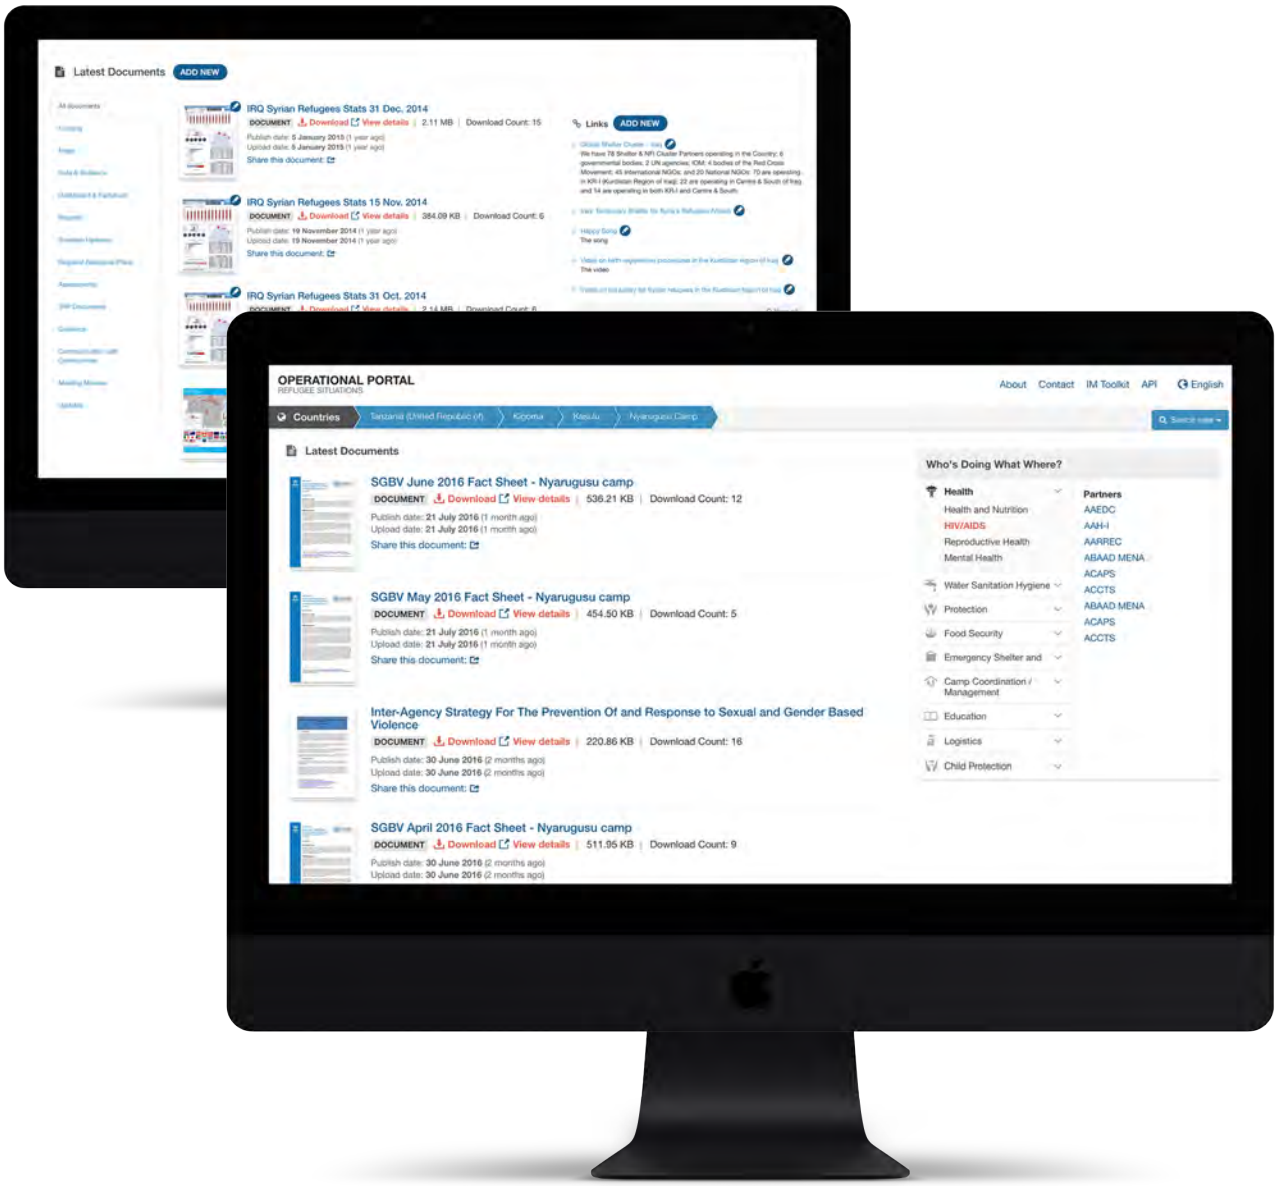


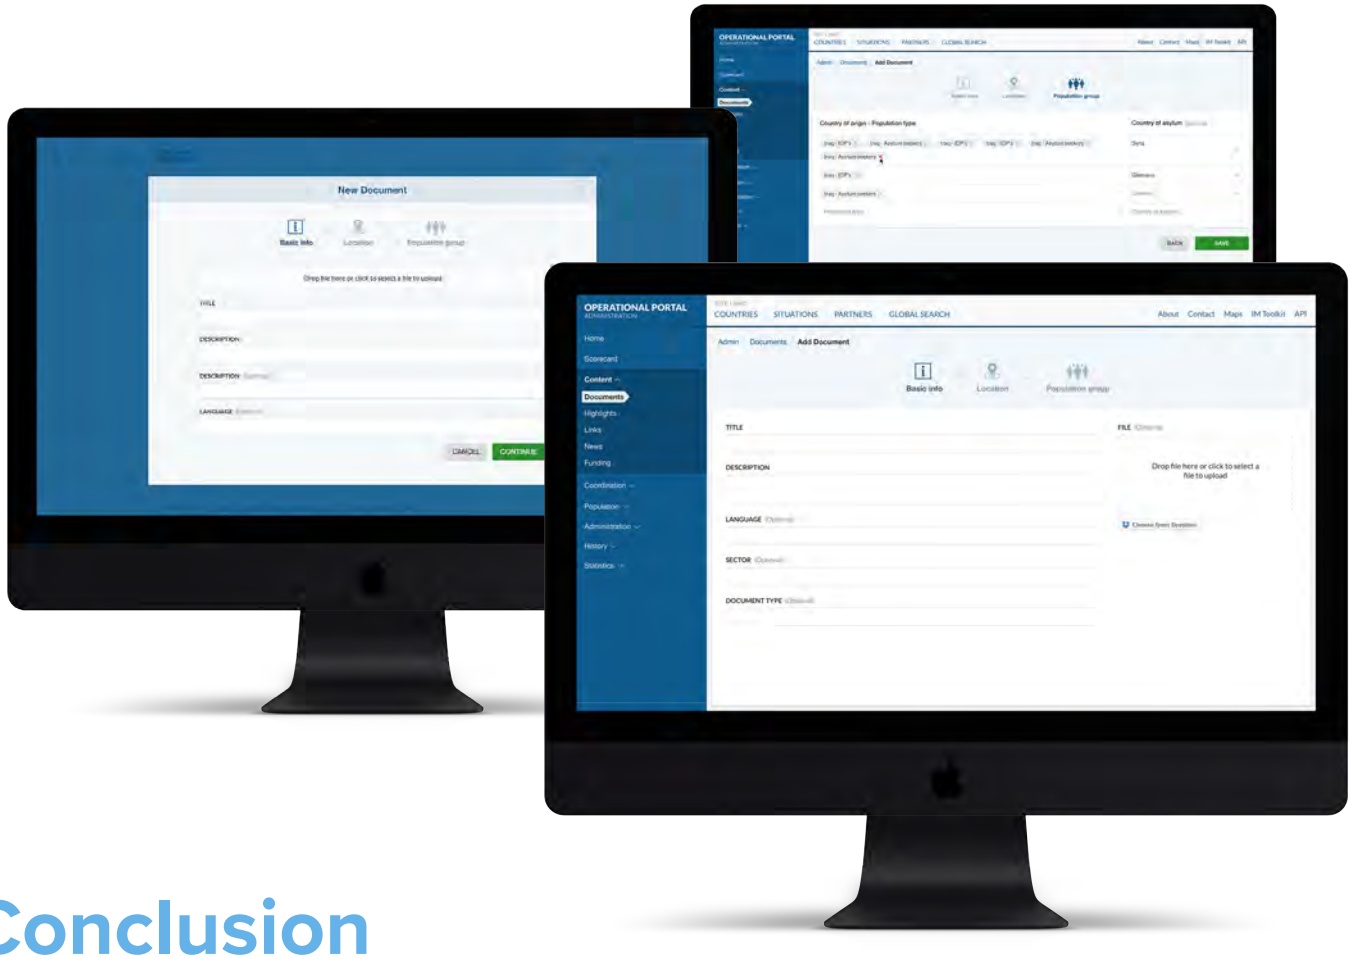
In addition to this, the website is used to provide information, arrange meetings, point out relevant events and generally provide current information to UNHCR staff worldwide.

Solution

All the relevant information at your disposal

The site features over 40,000 refugee records of various types.
Half of these are documents created by recognized authorities including, pdf reports, excel spreadsheets, word documents and various image types.
All content is indexed and searchable including actual document content (i.e. pdf text). This clever solution utilizes the latest technology to extract the actual content within the document and elastic-search this information to form a thorough and easily accessible index.

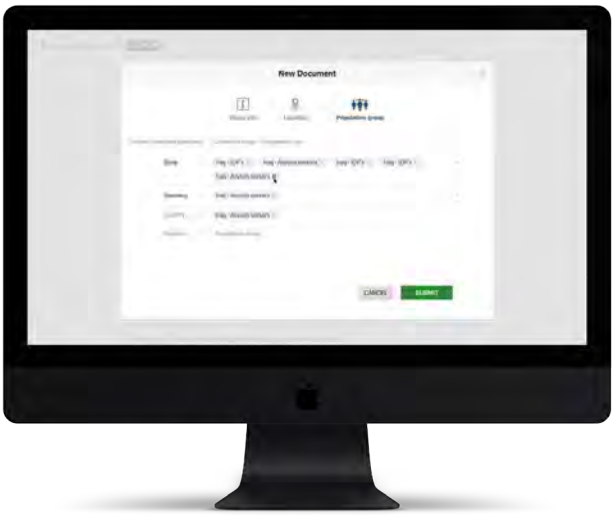


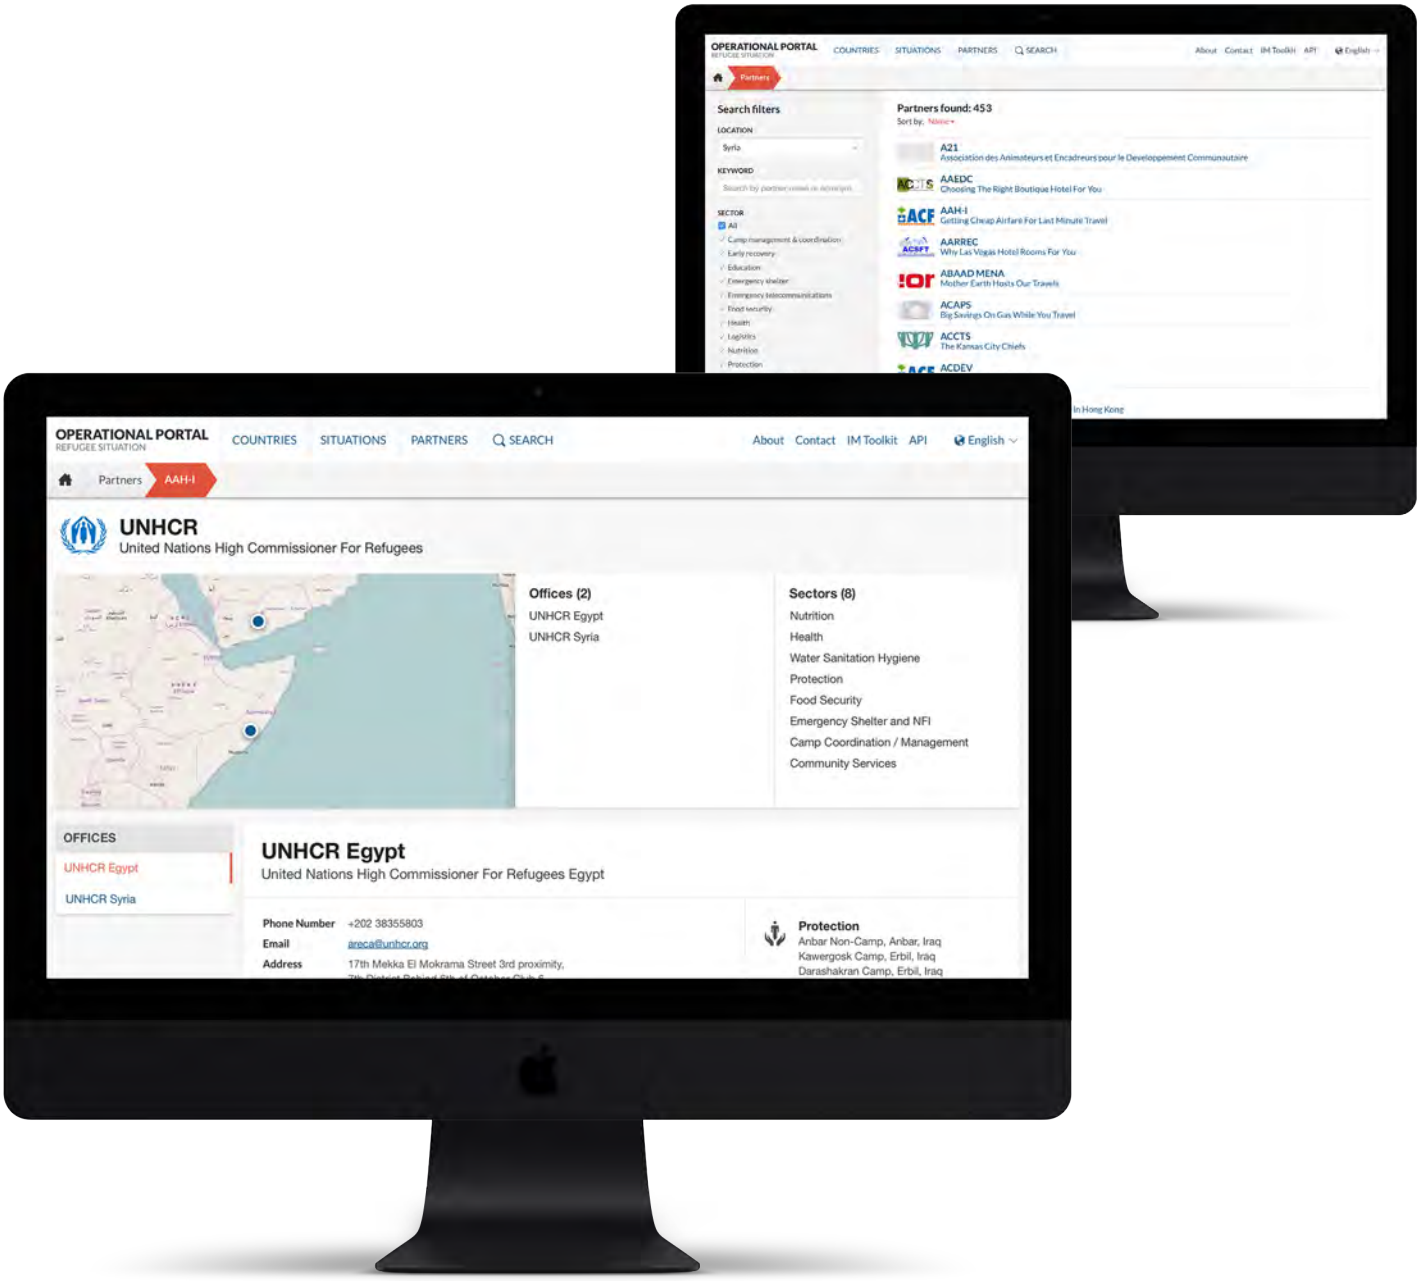


Conclusion

Information handling in minutes

Because refugee crises around the world are constantly changing, we at Hexis developed a system that is dynamic and allows for content tagging. Our grouping mechanism conveniently retrieves all of the relevant information pertaining to one situation, location or country.





Due to the dynamic functionality built into the tool, UNHCR administrators are able to establish new situations and pull all relevant information within mere minutes.

Software that suits you.

We care about the software. We speak your language. We make ideas come to digital life.
